# vue2-template

> Vue2 template with Webpack5 + Axios + Vuex + Element + Typescript

## Build Setup

```
# install dependencies
npm install

# serve with hot reload at localhost:8003, can connect personal machine
for test
npm run local

# development: serve with hot reload at localhost:3003, common development
backend
npm run r:dev

# future: serve with hot reload at localhost:3003, common future backend
npm run r:fudev

# build for production with minification
npm run deploy
# or
make

# run all tests
npm test
#or
npx jest

# check file syntax and format style
npm lint
```

## Code Submission Specifications

```
# install dependencies
npm install -g commitizen
commitizen init cz-conventional-changelog --save-dev --save-exact --force
```

Simply use git cz or just cz instead of git commit when committing. You can also use git-cz, which is an alias for cz.

For a detailed explanation on how things work, check out the guide and docs for vue-loader.
